

ZOOMIYO

PART 1

Understanding Trends

Monthly Sales Trends Product wise:

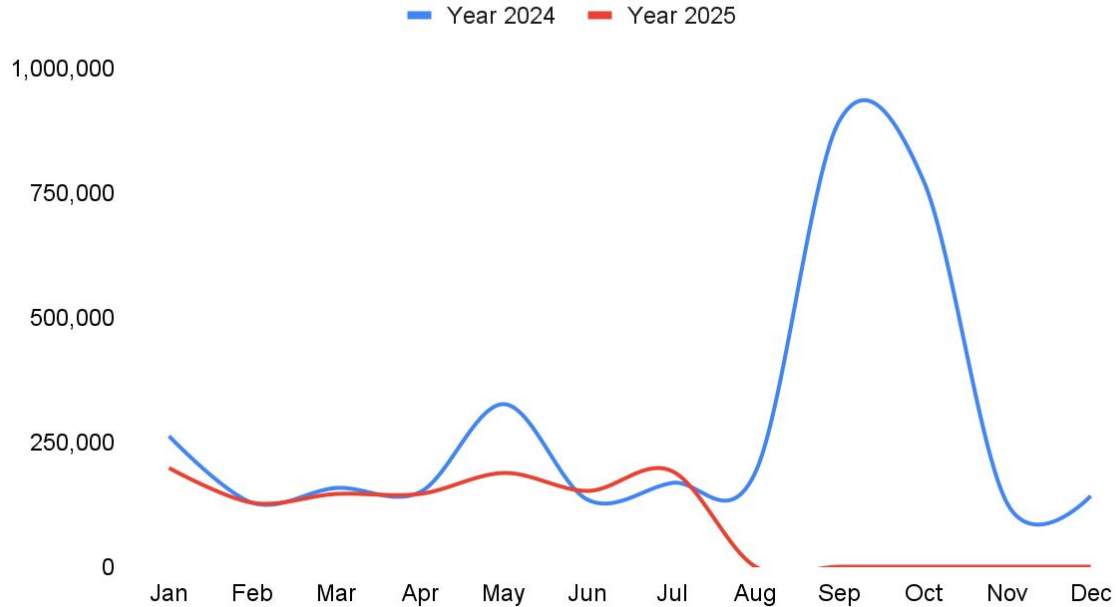

Product A: Strong recovery and momentum is building with time so inventory should be stocked for Diwali sale

Product B & D: Almost stable throughout the time period

Product C: Sharp decline in July when all products skyrocketed. Requires attention and a detailed investigation

Lumio's YoY Performance: 2025 vs 2024

Overall Brand has been degrowing in 2025 over 2024

- Sales in 2025 are lower than 2024 in all the months except Jun (+13.4%) and Jul (+13.9%)
- 2025 started weaker but recovery signs in Jun–Jul show that Lumio can bounce back with the right strategy
- The major drop of 2025 in May (-41%) pulled overall sales growth down
- 2025's Sep and Oct are going to be very critical for the business in order to come on the track otherwise the overall YoY growth will be negative

Highlighting the Relationship Between:

0.81

Traffic vs Sales

Traffic vs Sales

- Extremely **positive** relationship
- High Traffic → High units sold
- We can bring **more traffic** by using SB, SD & SP ads
- SEO optimisation → More appearance in search → More traffic

0.01

Final Price vs Conversion

Final Price vs Conversion

- Almost negligible relationship
- **Better Pricing ≠ High conversion**
- Decisions are driven more by brand trust, features, and reviews over small price changes
- Brand positioning, product features & customer support → More conversion

0.01

Rank vs Sales

Rank vs Sales

- Almost negligible relationship
- Rank ≠ success metric
- Customers **never** make decision based on the rank of the product
- Rank might be all time low but still Lumio might be making 2x

Are Bank & Coupon Offers Driving Incremental Sales?

-0.01

Banks Offers vs Units Sold

0.0

Coupons vs Units Sold

- No connection between bank & coupon offers and units sales
- Better bank & coupon offers $\neq$ Increase in sales
- Customer's purchase decisions are more **feature-driven**
- Offers play a key role during Prime & Great Indian Festival but during BAU they might not work
- Ads, SEO, Reviews, Influencer partnerships >> Heavy discounting
- Sales dependency is more on **traffic, visibility and product's features**

Product With The Most Stable Traffic:

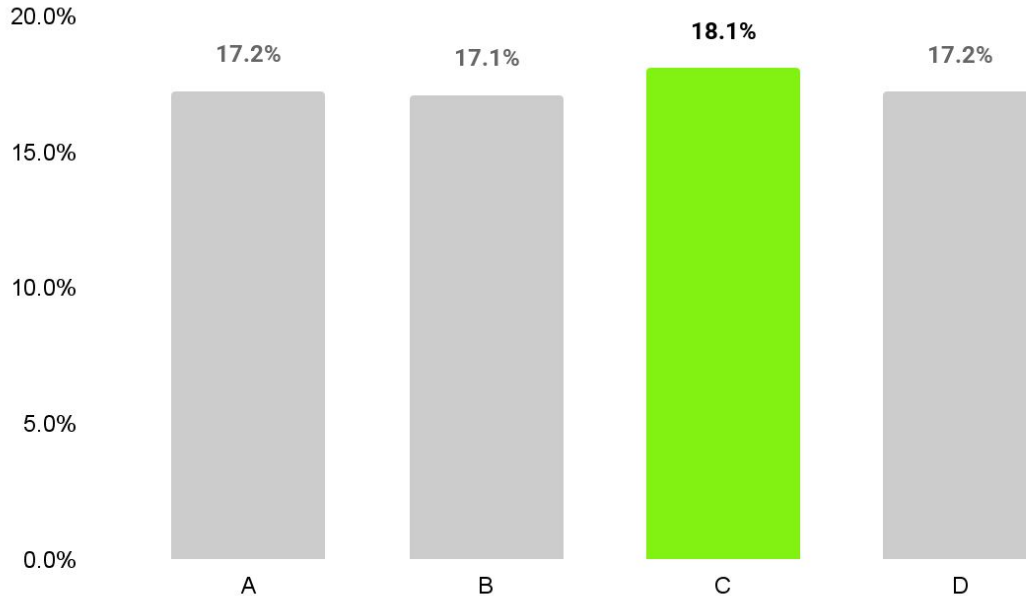

<u>Product</u>	<u>Traffic</u>
A	1.32
B	1.30
C	1.27
D	1.29

*Product with the
most stable traffic*

- Despite having the most stable traffic throughout the year, Product C's performance dropped when all other products were pumping in May 2025
- The answer of this question needs to be researched to avoid same thing happening during 2025's Q4

Avg Return Rate by Products:

Product C requires some attention.....

- Product C is the one having the highest average conversion rate (0.41%) along with highest average return rate
- Reducing returns by even 2–3% in electronics = major cost savings (logistics, refurb, resale losses) + improved brand trust → long-term sales growth

PART 2

Corrective Actions

If product with the most stable traffic has been declining in sales then this is what needs to be done.....

- Stable Traffic → Stable Visibility
- Sales decline → Likely Conversion issue
- Catalogue might not be an issue as it is already attracting the visitors

Root Causes & Possible Solutions:

- High visitors, but low add-to-carts → signals UX, shipping, or trust gap issues
- Pricing might not be as competitive as TCL, Xiaomi, Sony & Samsung
- Bounce Rate needs to be checked as TCL is heavily targeting us on every product page.
- How about a combo?
- Comparison tables on our PDPs are missing.
- I feel the A+ content of our products needs to be revamped. TCL uses the first piece of A+ content a high quality video and it is universal that videos always have better CVR and hook factor as compared with images
- Has Product C lost its “value-for-money” positioning?
- % of negative reviews need to be checked. Is there any negative sentiment in the reviews?
- Studying competitor’s same competitive product on a daily basis might give us clear insights

Corrective action that needs to be taken in order to reduce the sales returns

Possible Solutions:

- High delivery times → High RTO returns
- Lack of trust factors
- Found better price on other platforms (most common reason)
- Product expectations ≠ Reality
- Return Report of Amazon is enough insightful to get to the leakage area
- WoW Returns Analysis is a key to identify and mitigate the problem

Actions that we can take to improve the sales without any investment

Possible Solutions:

- Optimisation of SEO, titles & keywords → doing competitor's analysis on a monthly basis
- With every change, metrics should be tracked → to measure the effectiveness
- Steal competitor keywords → use their successful terms in our title/bullets (A/B testing is key)
- If they are working for them → will work us as well
- For this, Helium 10's Cerebro would be a game changer to take out the keywords that are giving rank with search volume
- Instead of highlighting only the features, we can highlight customer's issues as the main focus points
- Monitor competitor reviews → fix their common complaints in your product
- Replies should be given on our product's negative reviews

PART 3

Qualitative

**A pitch to convince the Business head at Amazon to
increase Zoomiyo's presence on TV category page →**

Where is ZOOMIYO?

SAMSUNG

SONY

a question from ~~Lumio team~~ customer

The Customer Reality Check:

What really happens:

- Current page scenario: Famous brands get hero spots → Customers buy familiar names → Innovation stays buried
- Customer's journey: Lands on page → Sees Samsung/LG → Buys safe choice → Misses better value
- The cost: Great products hidden = missed profits
- Lumio appears on scroll #7-8 → customer's decision has already been made

Actual brutal truth → Last scroll = no scroll
For customer, every scroll/click is a task

What Customers Don't Get To See:

- QD-Mini LED tech at ₹65k (competitors: ₹1.2L+)
- BOSS processor = fastest TV performance in India
- Premium product at smart pricing

Customer Behavior Data:

- 70% decide within first 3 sections
- 90% don't reach scroll #8 where Lumio lives
- Revenue impact: ₹2-4L monthly lost to scroll graveyard

The gap: No Indian premium brand in top 3 scrolls → customers default to Samsung ₹1.05L
Lumio's edge: QD-Mini LED + BOSS processor at ₹65K (40% cheaper, measurably faster)

The Simple Ask:

- Amazon's own Director of Consumer Electronics welcomed Lumio as bringing "fresh perspectives in premium category"
- Ask: Zoomiyo looks for fresh perspectives in terms of better visibility so it reaches to the customers who are in search of Premium products at smart pricing

Why This Makes Business Sense:

Amazon wins:

- ₹2-4L monthly revenue increase from better-margin products
- Fill the ₹50-70K gap between TCL basic + Samsung premium
- Higher margins on innovative products vs commodity brands

Customers win:

- Access to 16.51% CAGR growth segment innovation
- Discover performance leader in smart price range
- Avoid overpaying ₹1L+ for similar tech

Lumio wins:

- Visibility matching \$4.3M funding + highly experienced team
- Compete where strength lies (performance + value)

The Golden opportunity: Show breakthrough products = happier customers + better margins

Thanks For Your Time
